GERS ADMINISTRATORS'S UPDATE

With the passage of ACT No. 8540 also known as the GERS Rescue Act passed on January 31, 2022 by the 34th Legislature, and Legislature, thereafter signed into law by Governor Albert Bryan Jr., has brought some relief to the Government **Employees'** Retirement System.

It is now up to the Government of the Virgin Islands to secure the funding, so that, the GERS can continue

payments to the retirees.

Over the next 30 years (through 2052), GERS is expected to receive approximately \$4.1 billion with \$89.2 million expected on October 1, 2022. The Board of Trustees and the management of GERS would like to thank the Legislature and the Governor for joining together to identify a funding source for the stabilization of the GERS.

It is now the responsibility of the GERS to invest the contributions wisely, so that the portfolio can grow, and the pension funding equation Contributions + Investment Income GEONET = Benefits Payments + Expenses can be achieved. The future seems bright and I look forward to seeing the positive outcome of this mutually beneficial collaboration.

GERS Investment History

Contrary to what has been stated over the years regarding the investments of the GERS. It is because of the positive returns on our investments, that the System has been able to pay annuities over the years. With investing, there will always stand a chance of risks. Investment risk can not be predicted but is definitely a probability.

The bad investments of the System represent 3 cents of a U.S. dollar. However, if there was a positive return on the " Bad Investments" it would not have been enough to deter the fact that the Plan Sponsor of the System (the Virgin Islands Government) over the years have not paid its fair share in contributions since the implementation of the system in 1959. The GERS currently pays over 20 million dollars in annuities monthly to our retirees. Please see "The Bottom Line" on page two for additional member disbursement's.

GERS ASSET ALLOCATION AS OF 02/28/22

What Is Asset Allocation?

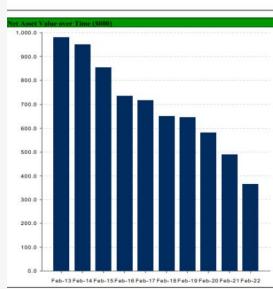

Financial Critics explain Asset allocation as an investment portfolio technique that aims to balance risk by dividing assets among major categories. These categories include cash, bonds, stocks, real estate, and derivatives. Each asset class has different levels of return and risk, so each will behave differently over time.

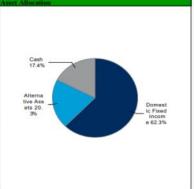

For example, while one asset category

increases in value, another may or decrease may not significantly. It is said to be the best protection against a major loss should things not turn out as planned. (Investopedia)

Overall, it has been concluded that asset allocation is one of the most important decisions investors can make and with the current status of the GERS, this technique has been utilized as the best strategy.
